Together we build our history.

Understanding the need for change in advance, and changing. This is the DNA of Faresin Formwork.

This is the dream of Guido Faresin, who since 1973 has chosen to change the construction sector, bringing spark and innovation to a static and saturated market.

The headquarters in Breganze is both the bond with the roots and nerve centre of Italian and international mechanical engineering, fertile ground for an entrepreneurial undertaking with its sights set on the future.

Here, Guido has shared with his team the energy and drive for change leading to the many successes over the years. Without ever forgetting the value of roots, he has conveyed the ability to look ahead, focus on exploration and the ceaseless drive towards technological, professional, and human improvement. A business model that Chiara, Lucia and Giacomo, the new Faresin generation, perpetuate and translate into today's language, know-how, and techniques.

Because making formwork means re-thinking space, creating opportunities for development, investing in research on new materials, construction methods and solutions: the solid foundations of the Italian leader and international benchmark in construction technologies.

Together we build our future.

Working for the customer means working with the customer. A journey undertaken in the world since the origins: today Faresin Formwork is a global company with offices in Europe, Asia, USA, Australia and Africa. And in a constantly accelerating world, Faresin Formwork innovation moves on at the same speed.

Every year, 10% of turnover is invested in Research & Development of new materials, products and solutions; the machine fleet is upgraded with modern, efficient and fast equipment; the resources used in training enable us to keep constantly abreast with the latest systems; new partnerships are signed with local companies with a view to assuring a presence and rapidity in operation sites.

In order to be close, active and useful to local communities, making the best use of raw materials and resources, improving technologies and putting forth advanced solutions to help companies and people evolve.

Together we build value.

Every project aims at generating added value over time from those benefiting from Faresin Formwork equipment – building site operators, customers, distributors, citizens – in a virtuous circle where business growth goes hand in hand with widespread wealth, for everybody. This is what a partnership with Faresin Formwork is about.

Together we build trust.

The value of people: diverse professional skills sharing the same principles.

Quality. In listening, exchanging views, scheduling and support to meet specific needs with functional and long-lasting products, from commonly used equipment to highly customised engineering solutions, such as the special formwork.

Safety. In work organisation, in the solidity of structures, in using appropriate protection equipment and well-established procedures. For a construction site that is constantly under control.

Presence. In our day-to-day exchanges with firms, in system missions with agencies and institutions, in new developments displayed at trade fairs and events and in projects for World Fairs.

Responsibility. Towards countries, communities and their regions, promoting growth through modular solutions that are compatible with the environment.

Together we build engineering solutions.

Engineering is not only a productive sector: it is the peak of Faresin Formwork experience and translates into solutions that are really state-of-the-art. Solutions, before products, that are able to meet the requirements of an advanced construction sector: effectiveness and continuity of performance, long service life, safety, flexibility, and customisation. The finest features of the range play out in the special formwork, which is designed and built in the Italian engineering centre in Breganze for highly customized projects, which can be adapted to different types of space, dimensions and requirements, according to specific infrastructural aims.

History, objectives, solutions. Values that have signposted the way for over 30 years: together we build the world.
